RQS User Manual

OVERVIEW

The **RQS** (**Report Query System**) provides users through a Web Application Interface to request a set of standard reports and retrieve reports that have been generated.

Changes made to the data in ABIS will not show up on any reports until the following day. A new report must be requested to see the changes that were made.

This user manual is geared toward the normal **RQS** user. **RQS** has four levels of users:

- Normal User
- Manager User
- Super User
- ITU User

Each level of user will have different level of permission and what **RQS** functions they can perform. Also depending on the user level, the level will affect what menu and screen options will be displayed. If a user does not have access to an option, it will not be displayed. The user will only see what they have access to.

Each user must have reports assigned to their **ABIS** user id in order to access the report(s). This access can be granted by a **RQS** manager (**RQS** user with manager rights) or by the Help Desk with authorization from the user's manager.

Besides requesting reports to be generated, it also provides the users access to reports which are generated from the nightly **RQS** report batch process.

The normal RQS user will only have access to the reports that they requested and any reports they have access to which are generated from the night report batch process.

There are several report formats which reports will be displayed in which is determined by the report. The most common formats are PDF and Excel. With these two formats the user can Save AS or print the report. Once report is saved, the user can then email the report. If the report was generated with attached to email, then the user can handle the report as a normal attachment. Save it, forward it if required, or open it (PDF will be open with a PDF reader or the default application used to open PDF files, Excel with Excel).

LOGIN

To login into the **RQS** you will use your current **ABIS** User Id and Password. To login into **RQS** you must have been given access to at least one **RQS** report. If you try to login into **RQS** even though you have a valid **ABIS** User Id and password the login will fail if you do not have authorized access to at least one report.

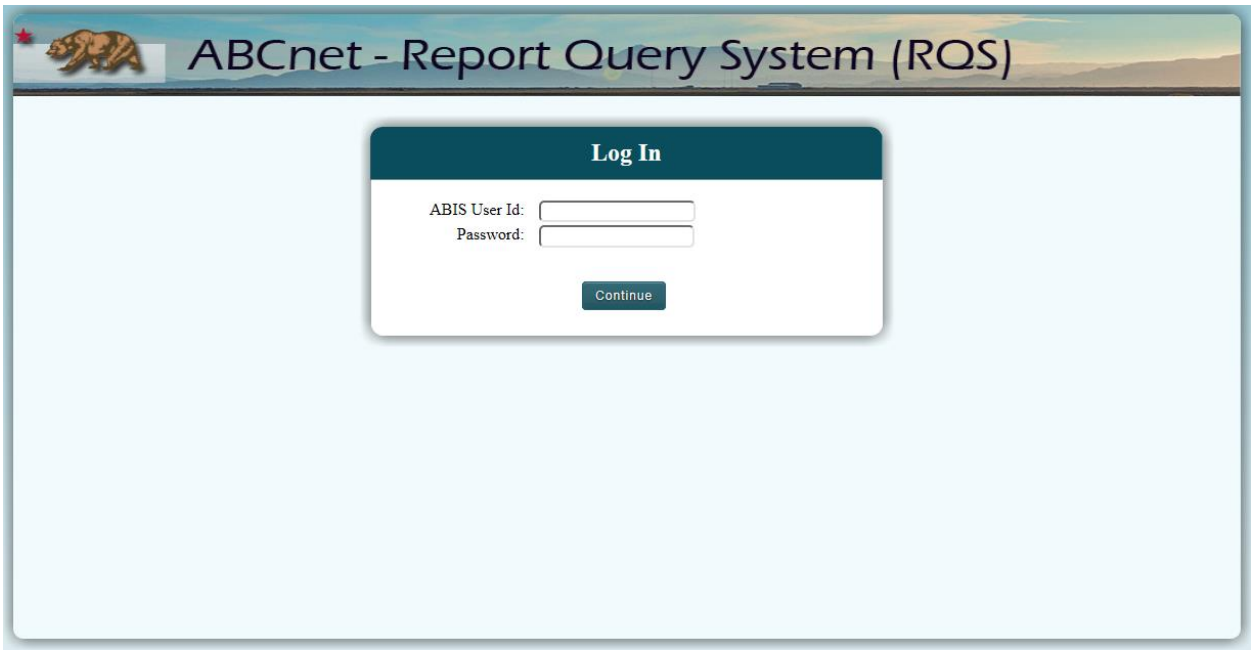

Figure 1 – RQS Login Screen

After a successful login the following main screen will be displayed with the available menu options your User Id is allowed to use.

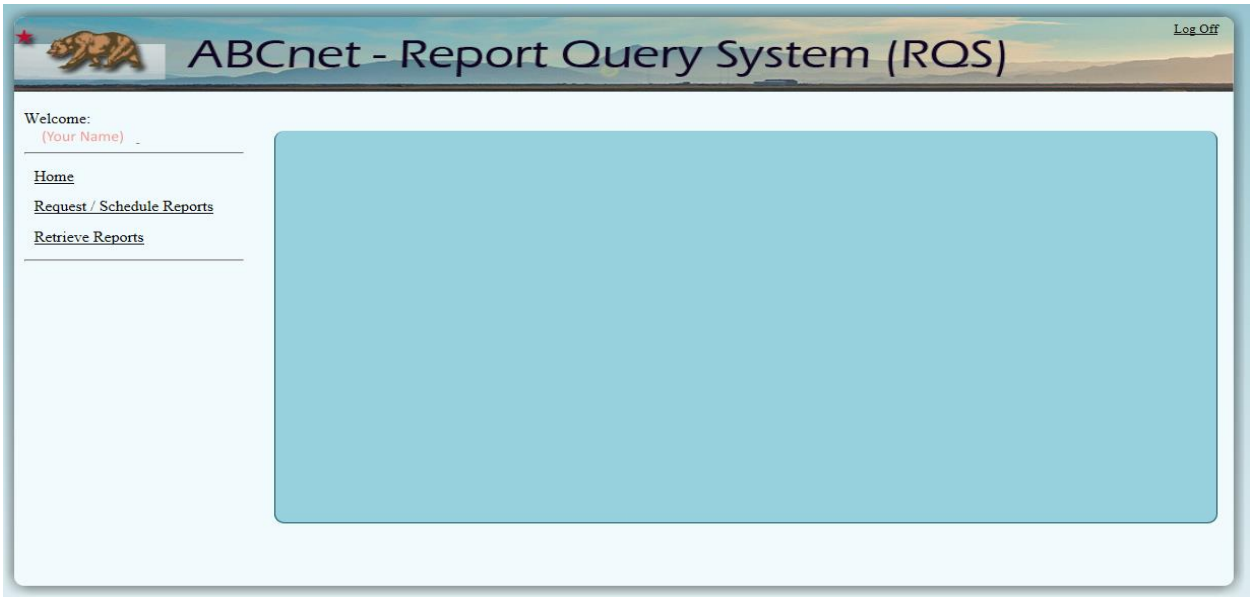

Figure 2 – RQS Home Screen

REQUEST / SCHEDULE REPORT

OVERVIEW

The **Request / Schedule Report** screen is used to request a report. From this screen the user will be able to select a report. Only reports available to you will be shown in the Reports dropdown box. The user will be able to:

- wait for the report to be generated and displayed;
- not wait for the report but be notified when the report can be retrieved through the **Retrieve Report** screen;
- not wait and have the report email to them upon the completion of the report

The user can also schedule a report to run at a later time and or date. This feature allows reports to run at night so the report will be available to the user first thing the next morning.

SELECT REPORT

To request a report or schedule a report to run at a later time or date, click on the menu option Request / Schedule Report. The following screen will be displayed showing a dropdown list of reports that you are available to request.

Figure 3 – RQS Report Selection Screen

If you are only authorized to request a single report, this screen is not displayed but the **Reports Options** screen will be displayed for the report you are authorized to run.

From the report drop down list, select the report to be requested. Upon the selection of the report the report options will be displayed.

REPORT OPTIONS

The following is the report options screen for a selected report. The report options are for the **ABC19** report and the user is assigned to Headquarters. The options can be different for different reports and if the user is assigned to a district, division, or headquarters.

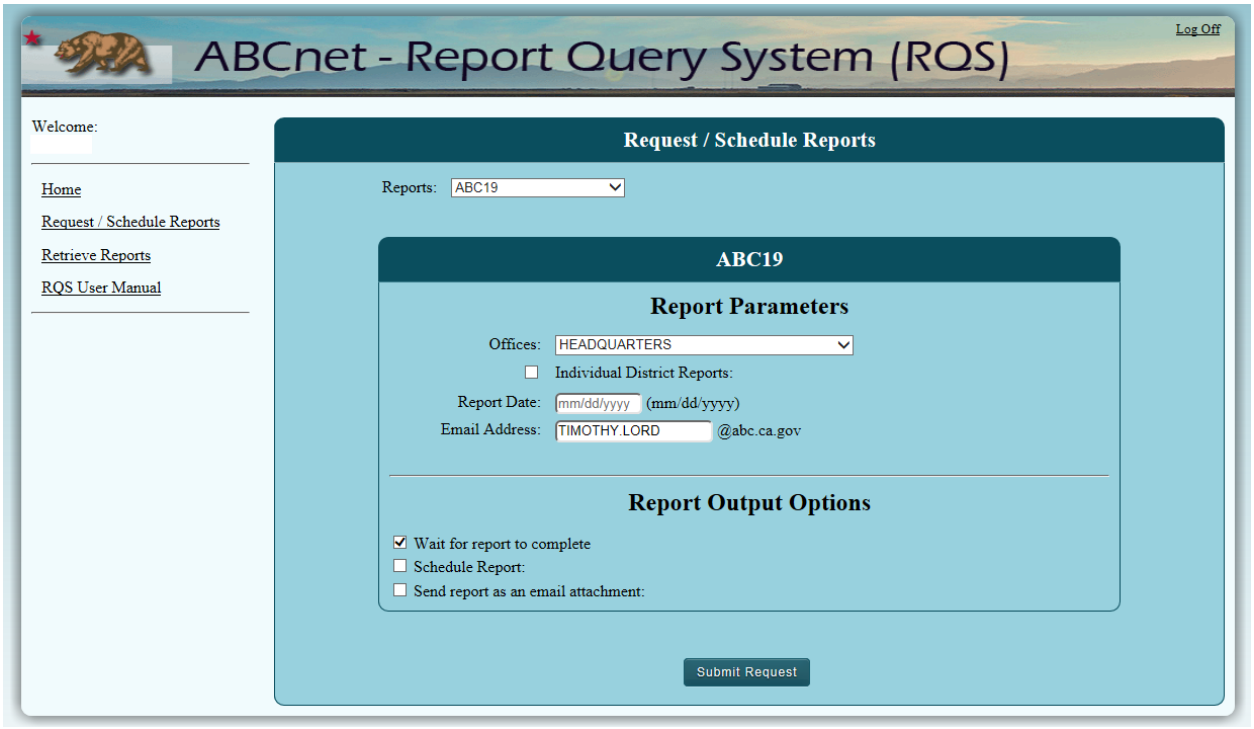

Figure 4 – RQS Report Options Screen

REPORT PARAMETERS

- Offices option will show for Users assigned to headquarters, a division, or a district user which is assigned to more than one district and the report is a district level reports. **RQS** has reports that are not district reports and this option will not be displayed.
  - Individual District Reports This option will only show when the office selected is "**NORTHERN DIVISION**", "**SOUTHERN DIVISION**", or "**HEADQUARTERS**". This option allows a division or headquarters user to run all the individual district reports at one selection instead of needing to request each district one at a time.
- Email Address option will show for all reports. It will be pre-populated with your email address. This can be changed to another person in ABC only. This cannot be changed to an external email address. This options is used when you select to schedule a report or for the report to be attached to an email.

All the other report parameters will be report specific.

REPORT OUTPUT OPTIONS

- Wait for report to complete — Default. If unchecked, **RQS** will not display the report status screen but send out an email notification upon completion of the report to the email address specified in the Report Parameters.
- Schedule Report — When checked it will display input boxes to enter when the report is to be run. Input boxes will be populated with the current date and time.
- Send report as an email attachment — when checked it will attach the completed report to the email notification when the report has been completed. It will also make the report as a schedule report but use current date and time to execute the request. It will run when submitted.

PROCESS STATUS SCREEN

The status screen show the current status of the report which was requested. Upon completion of the report the status will be complete and the report will be displayed in a popup window. Also from this screen, the report(s) can be canceled and return to the report option screen. After the report is completed the cancel button will turn into a close button to close the screen and return back to the **Report Option** screen.

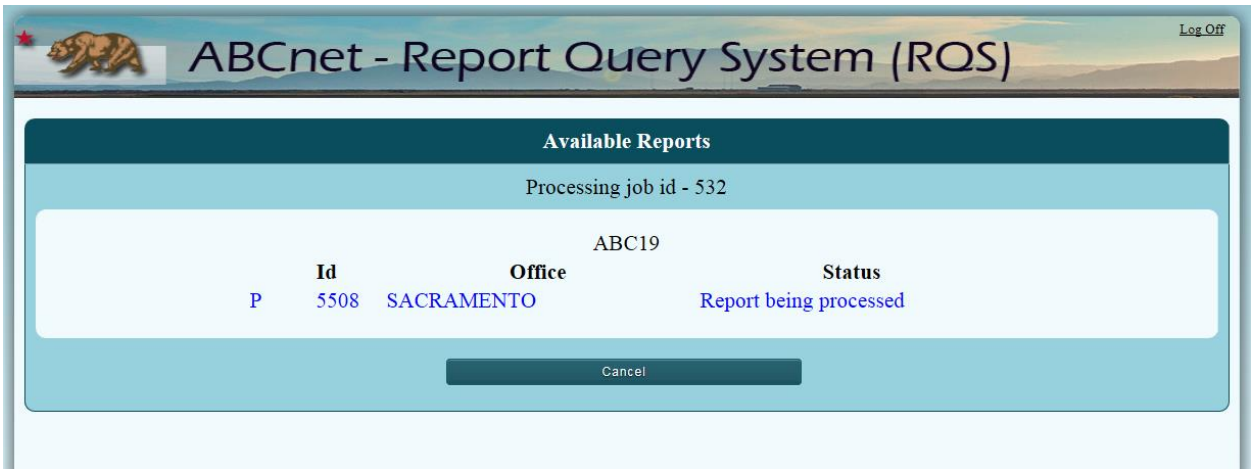

Figure 5 – RQS Status Screen Processing (Single Report)

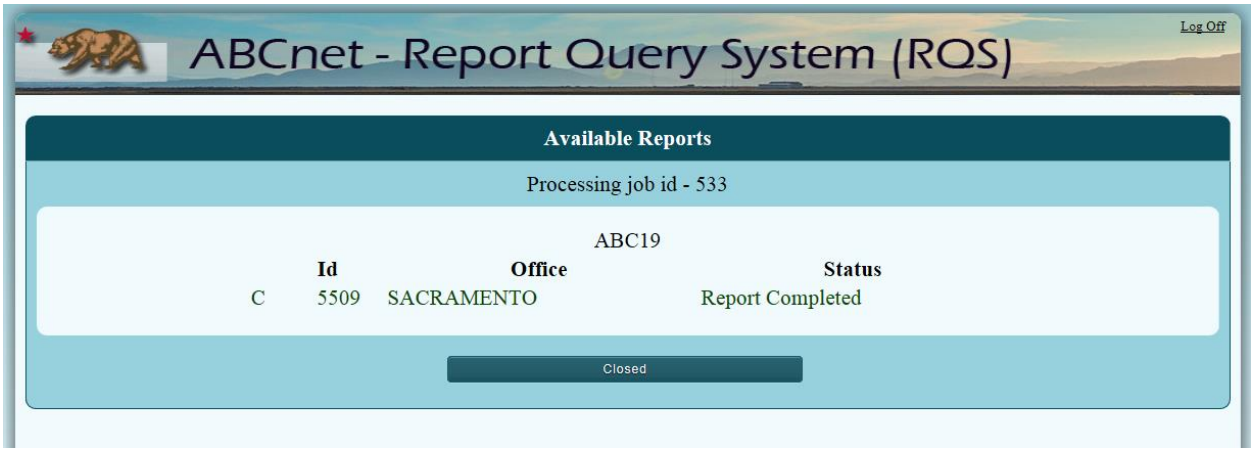

Figure 6 – RQS Status Screen Completed (Single Report)

When Individual District Reports is checked, the **Status** screen will display the status of all the selected districts as each report is processed. The reports are processed sequentially one at a time. When a report is completed it will **NOT** be displayed as a single report is selected. Once all the reports have completed, you then can click on each individual report to display the completed report.

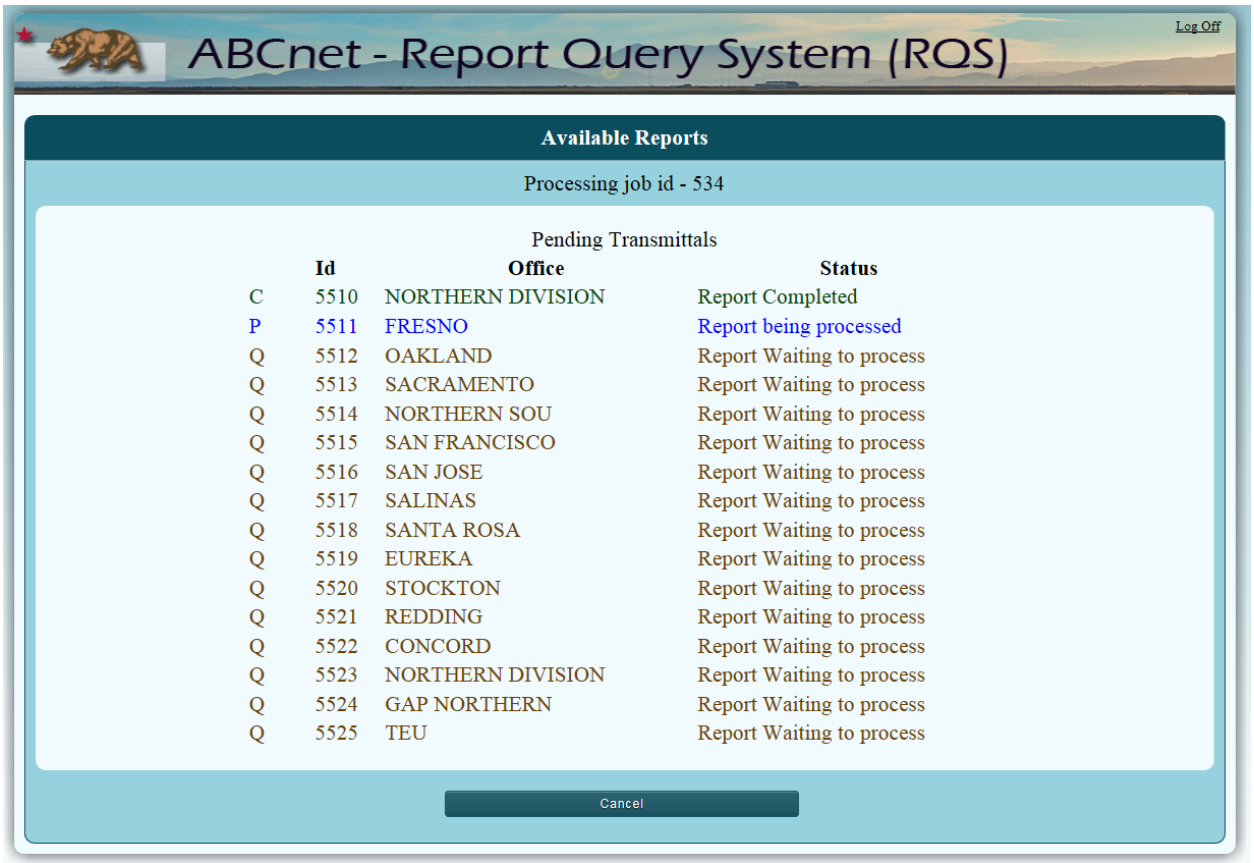

Figure 7 – RQS Status Screen Completed (Multiple Reports)

This multiple report status screen will only be seen by users which are assigned to a division or headquarters. A district user will never see a status screen with more than one report.

RETRIEVE REPORT

OVERVIEW

The **Retrieve Report** screens is used to retrieve reports that the user has requested, scheduled to run at a later time and / or date, and the reports generated by the nightly report batch. For a normal user, they will have access to the reports they requested and any reports (reports the user has access too) that the nightly batch job created. Normal user or manager user will only have access to reports that they have been authorized to request.

RETRIEVE FILTERS

The retrieve filters are used to reduce the number of reports that are return for the report selection screen. If not filters are used, then all available reports for a user will be returned and displayed in the Report Selection Screen.

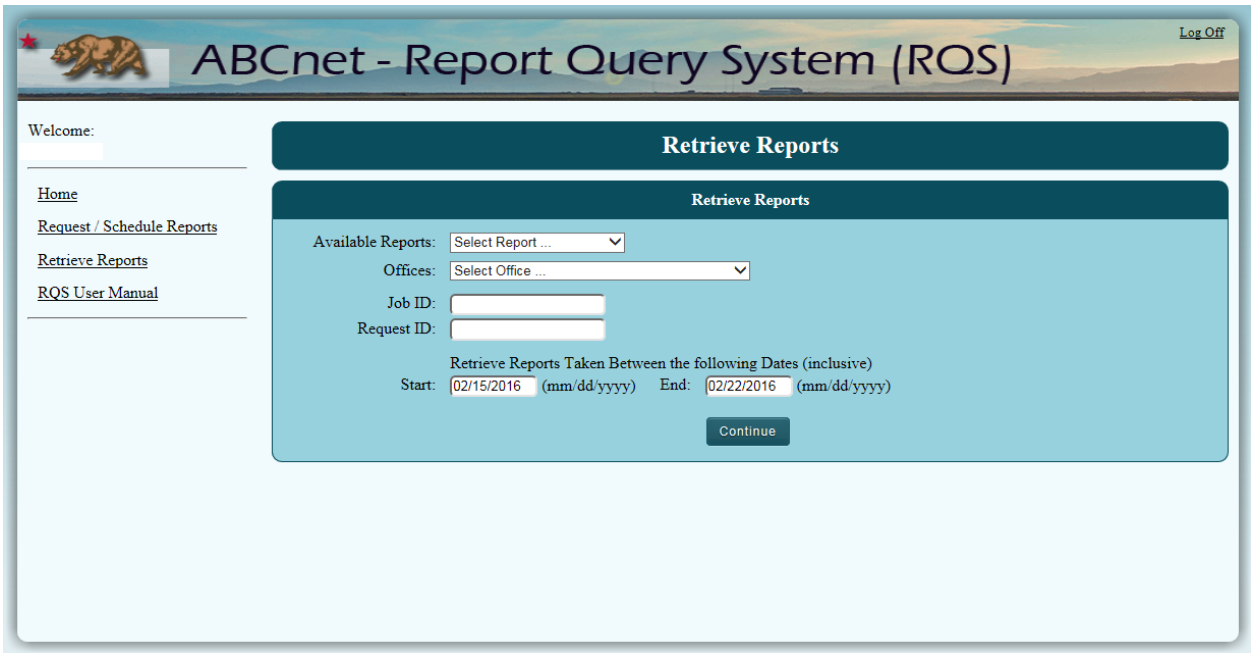

Figure 8 – RQS Retrieve Reports Filter Screen

- Available Reports — dropdown list of reports you have access to. If access to only one report, this option will not be displayed
- Offices — dropdown list of offices you have access to view their reports. If you have access to only one office this option will not be displayed.
- Job ID — this is the job id create when report(s) are generated. If known and only one report attached to selected job, then report will be displayed without going to the Report Selection Screen.

- Request ID — this is a unique id assigned to each report when it is requested. When email notification is used, this will be the id returned in the email body and can be used to retrieve the report by.
- Start — this date will filter out any report taken before this date. Default is seven days back from current date.
- End — this date will filter out any reports taken after this date. Default is current date.

For the **Start** and **End** date filters, these values are for when the report was generated and not the date the report was for.

REPORT SELECTION SCREEN

To select a report to display, click on the report line. The selected report will be displayed in a popup window (or tab).
